EZ Trail™

MAKE YOUR NATURE AREAS ACCESSIBLE TO ALL!

The EZ Trail system from EZ Dock is the smart way to create pathways in your woodland, wetland, or any other place you need a safe and durable walking platform. Our patented system is less invasive, and the large interconnecting, modular sections are simple to install. In addition, you can easily add sections as needed, or re-configure your walkway any time you like.

Treated wood and foam-filled products can be dangerous to wildlife habitats, but EZ Trail utilizes only safe, non-toxic materials.

The hollow sections provide stable flotation, and they can be suspended above vegetation during periods of low water, so as not to harm the habitat.

Our goal is to effectively and efficiently meet all of your outdoor walkway needs, while working in harmony with the environment — not against it. Simply put, EZ Trail makes it easy for anyone to enjoy nature at any time in any setting.

MAKE IT EASY WITH EZ TRAIL!

FEATURES AND BENEFITS

- Simple to install and remove without the use of heavy equipment
- Less invasive because it doesn't require permanent foundation
- Easily moved, unlike fixed walkways, piers or docks
- Modular sections allow for multiple configurations to suit your needs
- Versatile, self-floating design makes it suitable for land and water
- Can be suspended above vegetation by use of supports
- Easily set up for disabled and wheelchair accessibility
- Made of maintenance-free and non-toxic materials
- Longevity well beyond that of a treated wood walkway or platform
- High value based on its low upkeep and long-lasting usability
- Beige color is attractive, blends with natural surroundings and remains cool
- Light can penetrate through pieces to foster plant growth beneath
